Welcome Back Gardeners!

At the start of another gardening season, we dream, we plan, and we prepare. Spring gives us a chance to start fresh. To up our game and try new things.

With so many factors out of our control, it's wise to focus our time and energy on the areas of our gardens that we can more readily affect. This edition of NoCO Bloom is designed to provide you with a few new tools, including new plants, language, and technology, to work on whatever challenges – including spring snows, summer drought, or the dreaded “h-word” – Mother Nature might throw your way. Here's to another growing season filled with joy, learning, and perhaps...

...a tad less hard work!

THE HIGH-TECH LAWN

How could your front lawn ever be considered “high-tech?” While lawns are often maligned these days, the technology initially developed for managing golf courses and sports turf has been adapted to be used on the home lawn scale. For those of you who are into the latest and greatest in smartphones, smart home gadgetry, gaming, or VR technology, here are some cool, high-tech ideas for managing your lawn more efficiently — some of which may even reduce your water bill significantly.

The technology of using soil moisture sensors to run irrigation systems becomes better and better every year, with major irrigation companies like **Toro** offering sensors that will tell your irrigation controller to turn on and off based on the moisture level in the grass root zone. It’s similar to how a thermostat turns your furnace or air conditioning on and off without you having to do anything except set that sweet spot that makes you comfortable (or that desired greenness level, in your lawn’s case).

For running your irrigation system, the **Rachio** controllers (made right here in Colorado by a Denver-based company) are among the very best you can purchase. **Rachio** smart controllers are EPA WaterSense certified, use local weather data to determine when to water, can be run using Alexa and an excellent phone app, and will work with soil moisture sensors to fine-tune water application to all parts of your landscape. This company’s website and customer support are second to none; they will even recycle your old controller!

While European lawn owners are far ahead of us in using robot mowers, robotic mowing is catching on quickly in the U.S. The technology is advancing rapidly, evolving from less expensive models that require a border wire to keep the mower inside your lawn’s borders and away from your petunias (think invisible dog fence technology), to more expensive mowers that use high-precision GPS, cloud navigation, or camera technology to mow the lawn.

These silent electric mowers can run at night, detecting and avoiding objects in their path. And when their battery runs low, they’ll park themselves in their charging port, resuming mowing automatically after charging. The best-known companies selling robotic mowers for home lawns are **Husqvarna, Luba, Worx, Toro** and **Stihl**. 🌱

BEST NEW PLANTS

ish

FOR YOUR COLORADO LANDSCAPE

FRESH CHOICES FROM PLANT SELECT® (PLANTSELECT.ORG)

DWARF LEADPLANT

(*Amorpha nana*)

This is a compact version of the native leadplant that performs well in sunny locations — and thrives on moisture provided only by Mother Nature once established. Reaching a height and width of three feet, this is a great substitute for Russian sage and is a wonderful shrub for pollinators. Blooms are purple and smell of honey. Introduced by Plant Select® in 2020.

WINTER FIRE® SEDUM

(*Petrosedum rupestre* 'Rice Creek')

If you've planted 'Angelina' sedum with its chartreuse summer leaves and orange fall color, then consider Winter Fire®, whose green leaves turn burgundy during the winter. Like most groundcover sedums, this plant will gently fill in gaps and is perfect for rock gardens and hot, dry spaces. Introduced by Plant Select® in 2022.

CRYSTAL FROST™ ARIZONA CYPRESS

(*Hesperocyparis arizonica* 'Fandango')

Think beyond junipers and consider this beautiful Arizona cypress, with its bluish-silver needles that look like sparkling frost, ultimately growing into a smaller tree, up to 25 feet tall and 15 feet wide. This hardy cultivar is drought tolerant and makes a nice habitat for birds. Introduced by Plant Select® in 2024. Availability may be limited

BEST ANNUALS FROM THE CSU TRIAL GARDENS
(FLOWERTRIALS.COLOSTATE.EDU)

events 'n classes

STONEHEDGE BEGONIAS
(*Begonia hybrids*)

This new series from Benary® are not your typical wax leaf begonias! These hybrids can get up to 24-30" tall and flower from the early summer through the whole season, right up until frost. The hold the flowers up above the foliage and can do well in partial sun to shade conditions. The dark foliage provides for an excellent contrast to the pastel-colored flowers. Definitely a new wave of the wax-leaf begonias that won't disappoint!

FANCIFILLERS™ CHROME FOUNTAIN (*Centaurea hybrida*)

This plant was voted as the best novelty plant in the 2023 trials. If you are looking for a great foliage plant for contrasting other foliage and flowers, this is a great option! This upright selection (12-18"), similar to dusty miller, offers pubescent or fuzzy, silver-white leaves that are dissect and provide great texture to your planting. FanciFillers will do well with lower water inputs and handle warm temperatures. Great in full sun and in containers. Introduced by Westhoff.

LUCKY™ SUNRISE ROSE LANTANA
(*Lantana camara*)

Do you like a plant that provides flower power throughout the heat of the summer? And one that is always a-buzz with pollinators? Then try this lantana! This 2023 award winner from Ball FloraPlant, provides a great mix of flower colors, with florets opening an orange-yellow and maturing to a nice medium pink to light magenta color—reminiscent of some of our Colorado sunrises. The deep green foliage, typically free from pests, contrasts nicely against the rosy cluster of flowers. Expect mature plants to reach 12 - 14" wide and tall. Plant a few of these in your landscape border or in your deck containers! 🌸

TALKIN' TOOLS

Hey! You! You, with the blisters on your hands and the crick in your back. You are a caretaker of the plants that provide our community with shade, our food banks with vegetables, our pollinators with nectar, and your body with exercise. Your work is important, and, as such, you deserve great tools to make it easier and more productive — the kind of tools that make you think, “I should have bought this years ago!”

The garden centers and hardware stores are filled with shiny, appealing tools, but how do we determine which ones will be most helpful? The internet is a good place to start — with qualifications. Many reviews are written by people who receive free merchandise in exchange for reviews. The best way for those reviewers to get more products is to write a favorable review, and that reviewer may not even be a gardener, so their input can have little value. Instead, look for independent testers like Wirecutter from the New York Times or Consumer Reports.

By Bev Shaw, CSU Extension Master Gardener in Larimer County

gardener preferred

bypass pruners

anvil pruners

PRUNERS

Pruners are one of the most important tools in garden maintenance. They come in two forms: bypass and anvil. Bypass pruners work like scissors where the blades pass each other. Anvil pruners are like knives on a cutting board, where a blade comes down on a flat surface. This process crushes the stem or branch, leaving a messier cut that needs to heal. Bypass pruners are easier on the plant and the gardener. It's easy to tell which one you have just by looking, and if you have anvil pruners, it may be time to upgrade. A quick search of those independent testing sites will direct you to Felco or Corona pruners, which may last you a lifetime. Keep them sharp! Replacement parts are available online or at some independent garden centers. Your hands and plants will thank you.

rubber wheels

tip test!

WHEELBARROWS

Research will help you narrow down wheelbarrows on the market. Wheelbarrows have more maneuverability than garden carts (which have two wheels instead of one). Air-filled tires bounce over steps and curbs better than solid ones — if you've struggled with steps before, go backward! Wheelbarrows are best purchased in person after a lap down the aisles of the hardware store. Make sure the nose of the wheelbarrow doesn't get in the way when you tip it up, then select the one that Goldilocks would choose — not too heavy, not too light. Pick the one that's best for you.

HORI HORIS

Cue the trumpets for the glory of the hori, probably the most essential garden tool on any gardener's belt! A hori hori (which means “to dig-to dig” in Japanese) serves as a trowel, weeder, knife, and fairly serious weapon. It's impossible not to feel capable and in control when you face your garden with a hori on your hip. The best ones have stainless steel blades. Purists will lean toward the wooden handle on a tool from Japan (store it out of the sun so the handle lasts longer), while budget-conscious shoppers will find a variety of plastic-handled horis available on the market.

stainless steel blade

caution!!!

Which tool do you own that makes you most crazy? For me, it's hose-end sprayers, plural, because they keep breaking. Research has led me to an all-metal hose-end sprayer that I look forward to using this spring. Never again will the plastic seams of my sprayer burst, soaking me unexpectedly.

When I head into a garden, I have my phone, lip balm, pruners, and a hori in a tool belt. This very short tool list lets me accomplish most maintenance tasks (and keep moisturized lips). Of course, if I'm planting or mulching, I'll need other equipment, but these are the basics. Spend some time considering which tools are on your list, then head to a hardware store to peruse the electrician and carpenter's belts. Avoid the large open pouch to save yourself from digging for the right tool. Get one that holds exactly what you need (your hori may be in a separate sheath on your belt), not more, and head out to the garden. **Happy shopping — you deserve the best!** 🌻

LEARN THE

by Bryan Fischer, Curator of Plant Collections and Horticulturist, The Gardens on Spring Creek

It can be overwhelming to look at a plant's name when shopping. What does it all mean? Believe it or not, botanical Latin names weren't created to add complexity to gardening; they arose from a need! Perhaps the quickest way to understand this is to consider the plant referred to as "sage." I can think of several plants referenced by the common name, ranging from western big sagebrush (*Artemisia tridentata*) and culinary sage (*Salvia officinalis*), to ornamental garden sages, like meadow sage (*Salvia x*). To avoid confusion, botanists employ a name system devised over 300 years ago, consisting of two name parts that are a bit like using a first name and a last name.

Just as everyone in my family could appear on a roster under "Fischer," all pines fall into the genus *Pinus*. A second, more precise name, much like my first name, "Bryan," is applied to each species in the group to distinguish them from one another. So, just like "Fischer Bryan," the name for the species Mugo pine is written as *Pinus mugo*. Since it's Latin, it is italicized for clarity. Only the genus is capitalized. Clear as mud?

There's a logical origin to these names. Typically, the genus name is the Latin name for that plant (if it was present in ancient Rome, as is the case for the genus *Pinus*), a person's Latinized name (often the person doing the classifying or someone they wanted to honor), or a Latin descriptor for a feature of that whole group of plants.

The second name typically describes the plant's physical appearance, where it grows, or it is another person's Latinized name. A quick trick to know which it might be is to check the name's ending: species-level names originating as the names of people typically end in "i" or "ii," pronounced "eye" or "ee-eye," respectively.

LINGO

These names are often worth an internet search; knowing the origin of the name, like the fact that Western poison ivy's scientific name (*Toxicodendron rydbergii*) translates to Rydberg's (*rydbergii*, botanist involved with its scientific naming – poor guy!) toxic (*toxico*) tree (*dendron*, like dendrology), makes it much more memorable. Don't hesitate to break such words apart online, and you'll start to find patterns.

Memorizing a few of these word parts or tricks makes scientific names memorable and useful. It also helps turn these initially daunting names into quick references for understanding main plant features and differentiating similarly appearing or named plants when shopping, in text, and in talks. And, remember: if you're letting fear of pronunciation hold you back, Latin is a dead language. So, if you're being understood, you are succeeding! 🌸

TO GET YOU STARTED,
HERE ARE SOME COMMON WORD PARTS
 USED TO MAKE SCIENTIFIC NAMES BY THE PLANT COMMUNITY:

ENGLISH

LATIN

Silver	Argentus
Gold	Aureus
Green	Viridis
Red	Rubrum
Yellow	Flavus
Leaf	Folium
Flower	Flora
Fruit/Seed/Seedhead	Carpel
Big	Majior
Small	Minor

GARLIC
Allium sativum

BLACK EYED SUSAN
Rudbeckia hirta

CEDAR PINE
Pinus glabra

LEDUM
Rhododendron tomentosum

LET'S PARTY!

XERISCAPE

GARDEN PARTY IS BACK!

LEARN

Learn about water-wise landscaping from the experts - local professionals, non-profits, City staff and Colorado Master Gardeners will all be on hand.

PARTY

Celebrate the art of landscaping with family-friendly activities, live art demonstrations, live music, a prize drawing, food trucks, and more!

SWAP

Participate in the Pollinator Plant Swap! We welcome donations of any pollinator plants grown free of chemicals, but you don't have to donate to take some home.

JOIN US AT THE XERISCAPE DEMONSTRATION GARDEN!

Saturday, June 1 • 10 a.m. - 1 p.m. • 300 Laporte Ave.
